

Cognitive Computing In Insurance Conference 2019

6 – 7 March 2019 | Emperors Palace | Kempton Park

Overview

As Cognitive Computing reaches new levels of sophistication, the insurance industry may just be uniquely positioned to capture data, learn from it, and then put things back in context to help insurance companies take better actions. We are witnessing a shift from simple robotic process automation and textual analysis to more advanced applications, including voice and image/video analytics. Insurance companies can now analyse gigabytes of data and recognise risks that were previously ignored due to a lack of analytics tools and platforms.

From speeding up Onboarding processing, to straight through claims and real-time risk assessment, there are profound examples of insurers already exploring ways for AI to unlock huge amounts of monies in value.

At Cognitive Computing in Insurance Conference 2019, you'll learn how to translate technology into an enhanced customer experience, and how to move beyond basic data analytics into intelligent interaction enabling enterprise-wide automation. This means delegates will have a perfect opportunity to interact with all the other insurance industry professionals from far and wide, they will walk away with a clear understanding and know-how to design and implement those changes.

MNT Events invites all insurance executives and innovation enthusiasts from across the insurance spectrum to attend this high powered event and witness the industry experts discuss new technology advancements.

The Cognitive Computing point of View:

- Enable Advisors to deliver cost effective personalized advice
- Support agents and underwriters by pre-reading millions of pages of regulations, past historical cases, and relevant information
- Provide evidence based advice to claims adjuster using structured and unstructured datasets (images, contact center notes, claim notes, social media posts, etc)
- Helps make policy pricing/underwriting during sales and marketing
- Help counter fraud by analyzing structured and unstructured data in real time using speech to text, notes, policies and regulations, previous claim history, etc
- Consolidate, Search and Analyze enterprise data
- Advise members/customers on claims processing and guide them through personalized process such as getting rental car, or getting an appointment with restoration service, etc.

Who should attend?

- Everybody who is anybody in the insurance business and that wants to hold onto good risk while accurately pricing the bad one.
- Anyone who is in the data collection, processing, storage or analysis business and wants to profit from the enormous flow of driving data generated by cognitive systems.
- Cognitive systems users who want to understand the business proposition of near to real time,
